Con' Theory.?!

Nowadays, a conspiracy theorist is known as someone with extreme views, usually against their respective government.

Well, I'd like to help dispel this theory, thanks to a profound point made by my favourite lady, V5.

According to the Oxford online dictionary, **conspiracy** means*: a secret plan by a group of people to do something harmful or illegal*.

In factual fairness, it's been proved a lot of corporations have been convicted as criminals, so, when appropriate it's wise to judge accordingly.

What does the O.D. make of a **theory**: *a formal set of ideas that is intended to explain why something happens or exists.*

A theory is an idea or an imaginative conception, which cannot be considered factual or true, until it's been proved.

V5 suggested that all conspiracy theorists can be placed on a par with all other theorists; all of whom offer various ideas.

Then she offered some examples, like Isaac Newton, who came up with the idea of gravity. Another theorist was Charles Darwin, who proposed the idea of evolution, and then there was Albert Einstein who postulated that idea of relativity; all remaining theories to this day, to my knowledge.

These three theorists are considered as the most intellectual humans ever to exist; according to the establishment at least.

So, the next time anyone calls you a conspiracy theorist, remind them, that places you on a par with genius.

Can I recommend conspiracy fact; which are ideas that can be proven to be true, and very real.

Decipher the code.?!
